

## Excellent cycling

Christmas, Florida

When it comes to forming round tanks, EFCO® is unsurpassed. **O.R. Dean Construction** recently selected the EFCO REDI-RADIUS System to form the round tanks at the Claude H. Dyal Waste Treatment Plant expansion, Christmas, Florida. With two 60'0" diameter x 17'0" tall sludge thickeners and one 120'0" diameter x 12'0" tall washwater recovery basin, the REDI-RADIUS's versatility and ability to easily adapt to different radiuses have allowed O.R. Dean to achieve excellent cycling times. O.R. Dean is very pleased with the progress and concrete finish.

O.R. Dean also used the HAND-E-FORM System with SUPER STUD® stiffbacks to form some very complicated 36'0" tall filter building walls.
